

Resume Parsing

API Path
/profiles/

POST - /profiles/resume/parse

Authentication:

Client Credentials, Customer, Tech Pro

Abstract:

Parses the resume using Burning Glass, but not create a profile. The resume is sent in the payload converted to Base64. The resume may be **.doc**, **.docx**, **.pdf**, possibly other formats.

To convert your resume file to base64 you can use the BSD **base64** command line tool.

Excerpt from man page for base64

NAME

base64 -- Encode and decode using Base64 representation

SYNOPSIS

base64 [-d | -h | -v | -D] [-b count] [-i input_file] [-o output_file]

DESCRIPTION

base64 encodes and decodes Base64 data, as specified in RFC 4648. With no options, base64 reads raw data from stdin and writes encoded data as a continuous block to stdout.

Parameters:

Payload:[illegible]

Implemented in:

`com.dice.profiles.controller.ProfilesController.parseResume(String)`

Example Usage:

api.dice.com/profiles/resume/parse

Returns On:

200 - JSON containing resume data.

40x - Problem with payload.

500 - Problems elsewhere.

Sample Output 200 Response

200 Expand source
